

# Daylighthouse 2, The Netherlands, 2012

Larch framing and cladding

Interesting Facts:

- **TANALISED** wood frame supporting an innovative and striking timber house, known as Daylighthouse 2, The Netherlands.
- The timber frame and cladding is made from FSC certified Larch.
- Exterior treated timbers have a built-in water repellent.
- The architect designed the house to blend into the local environment and to make the most of the natural light, including large windows, a full glass facade on the south-west side of the ground floor and a glass-roofed 'winter garden'.
