

Diamond Hill, Connemara National Park, 2010

Tanalised treated Larch and Douglas Fir

Interesting Facts:

- **The construction of a walkway in a boggy, mountainous environment to allow general public access to Diamond Hill mountain and adjoining conservation areas whilst helping to prevent erosion and damage.**
- **Tanalith® E treated Larch and Douglas Fir boards were used - supplied by Aughrim Timber, Co Galway.**
- **Tanalith® E preservative was selected over other latest generation products because of the proven long-term protection against decay and insect attack, particularly in ground contact applications.**
- **Project completed in 2006 - timber still performing well after 5 years in service in a very tough environment on the western sea-board of Ireland.**
