

Xanten, Germany, 2009

Tanalised® E treated playground timbers

Interesting Facts:

- **Part of the archeological museum and excavation site of the original Roman fortress in Xanten, Germany. The playground is designed to teach children about Roman fortresses as they play.**
- **Re-built with Tanalised® E treated timber after the original project was demolished after just a few years due to decay of the poorly treated timbers.**
- **Tanalith® E preservative was selected over other latest generation products because of the treated timbers' 25 year assured service life.**
- **Several on-site inspections and sample analysis took place during the treatment to ensure correct specification.**

Design details to allow water run-off and to protect cross-cuts.
